

Vega 100 Series — Flexible Resilient Hybrid Routing and Processing

Data Sheet

The Vega 100 Series is available in three frame sizes from 6x6 to 144x288 with an impressive feature set including hybrid video and audio routing, powerful processing, input embedding, synchronizers and clean and quiet switching.

- **Vega 200 (2RU)**
1x95 to 95x1
- **Vega 400 (4RU)**
1x191 to 191x1
- **Vega 700 (7RU)**
144x288 to 288x144

Any mixture of:

- SDI Video
 - SD/ASI, HD, 3G
 - Fixed coax I/O
 - SFP coax, fiber and HDMI
- AES
 - Balanced or unbalanced
- Up to 6 MADI inputs and 6 MADI outputs

Key Features:

- Hybrid video and audio routing
- Embedded, AES and MADI audio routing
- Audio track shuffling
- Input Embedding
- Clean and quiet switching
- Line synchronization
- Ultra resilient
 - Redundant PSUs, controllers, crosspoints and fans

Flexible hybrid video and audio routing

Video, AES, Embedded and MADI interconnects for maximum flexibility in multiple audio formats. Balanced and Unbalanced AES connections. Increased system design flexibility. Mixed signal routing in a compact frame. Ideal for small / medium live production in OBs and studios.

Clean & quiet switching

Clean switching line disturbances, and V fade Audio. Disturbance free on-air master control and switcher bypass applications.

Asymmetric signal routing

Each signal port independently software configured for use as an input or an output. No input or output port wastage! Can negate the need for the 'next size up' router (particularly for monitoring and distribution applications). Change the router size without hardware changes.

Multiple video connection options

Coax, fiber SFP and HDMI I/O modules. Spans video physical layer boundaries. Simply route between SDI to HDMI. No need for external fiber or HDMI converters. Reduced cabling, increased reliability. PC graphics and PC monitor routing.

Extensive redundancy options

Dual redundant crosspoints, frame controllers, power supplies. Full protection for critical or 'live' services. No loss of revenue from sub-assembly failure!

Ultra compact frame

50% more signal ports than conventional BNC electrical router for same rack height. Greater efficiency with reduced racking space & costs. Or more ports for future expansion!

Entry level lower cost alternative

Dedicated 12-port 'coax only' SDI rear modules. Minimizes outlay and complexity for 'all-coax' installations.

Comprehensive set of 'soft' and/or 'hard' control options

Intuitive 'plug-n-play' control software and/or 1RU and 2RU control panels. Multiple solutions for all workflow environments. All can co-exist on one router.

Vega 100 Series Architecture

Input / Output Frame Types and Configuration

The Vega architecture allows for an individual channel on a rear panel to be configured as an input or an output. In the Vega 200 and 400 frames, this applies to all slots; in Vega 700 there is a mix of input, output and configurable bi-directional slots. See table opposite

Module Types and Configuration

The table opposite shows which module types can be used as an input and output.

Input cards can be fitted to any Input or bi-directional slot.

Output cards can be fitted to any output or bi-directional slot.

The Audio crosspoint MUST be fitted in a bidirectional slot

Vega 100 Series - Input/Output Port Configuration

Frame	Module Slots	Type	Port Input/Output Options
Vega 200	8		All ports can be configured as inputs or outputs
Vega 400	16		All ports can be configured as inputs or outputs
Vega 700	36	Video	144 input ports (12 slots) 144 output ports (12 slots) 144 configuration (input or output) ports (12 slots)
		Audio	144 output ports (12 slots) 144 configuration (input or output) ports (12 slots)

Input/Output Module Types

Type	No. of Channels	Input	Output
SDI coax	12	Yes	Yes
SDI SFP	12 (6 HDMI)	Yes	Yes
SDI Input Processing	9	Yes	No
SDI Output Processing	9	No	Yes
Audio Crosspoint & MADI I/O	6 in + 6 out	Yes	Yes
AES Balanced	24 pairs (takes 2 slots)	Yes	Yes
AES Unbalanced	24 pairs (takes 2 slots)	Yes	Yes

SDI coax and AES modules

Each port is configured as an input or an output via the router controller configuration screen.

SDI SFP module

Each port is an input or output dependent on the type of SFP module fitted (receiver or transmitter). Ports can be configured by the router controller as input or output (fixing the configuration even if no SFP is fitted), or automatically set as input or output when an SFP is inserted.

SDI Input and output Processing modules

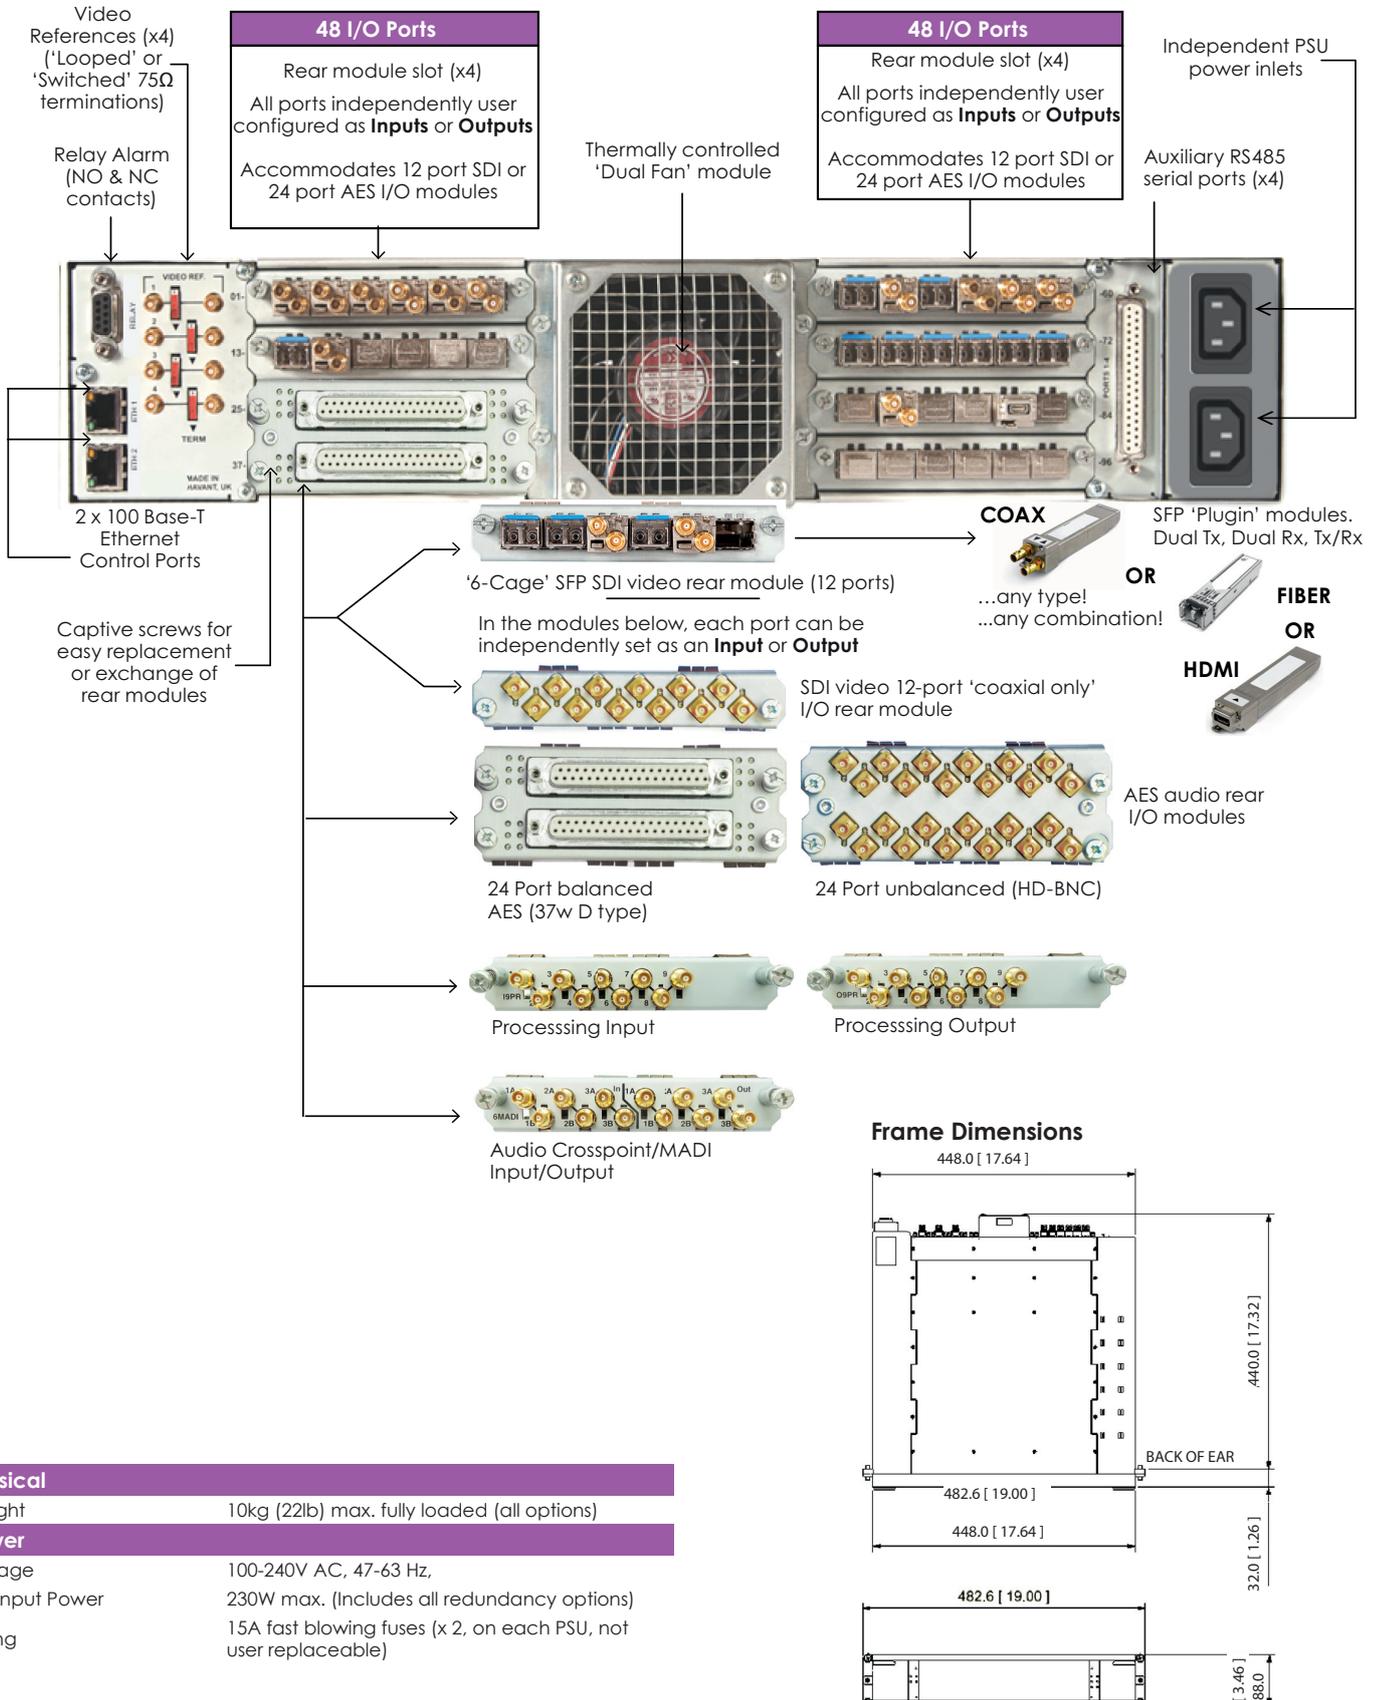

fixed input or output functionality

Audio crosspoint with MADI inputs and outputs

MADI fixed as 6 inputs and 6 outputs.

Frames and options

Vega 200

Physical

Weight 10kg (22lb) max. fully loaded (all options)

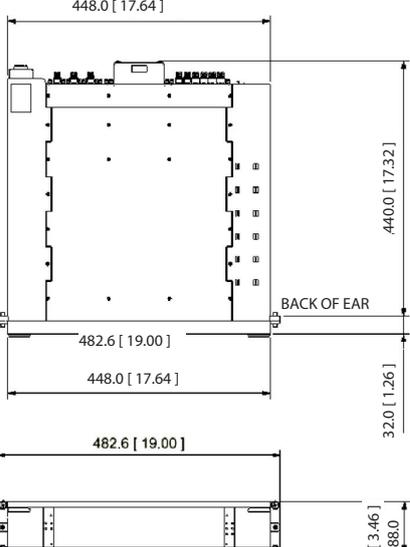

Power

Voltage 100-240V AC, 47-63 Hz,

AC Input Power 230W max. (Includes all redundancy options)

Fusing 15A fast blowing fuses (x 2, on each PSU, not user replaceable)

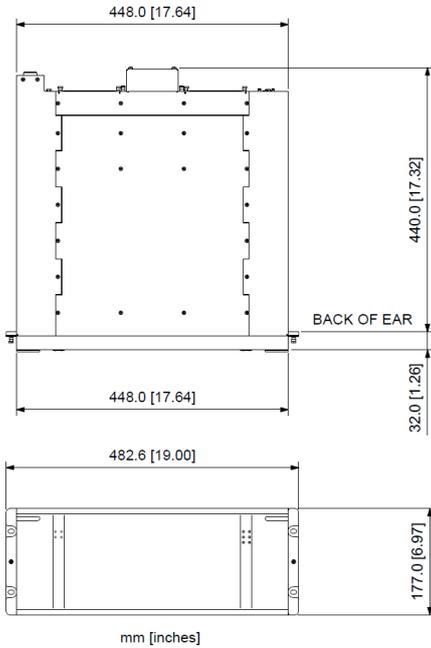

Frame Dimensions

Vega 400

16 module slots.
All ports can be configured as inputs or outputs.

Frame Dimensions

Vega 700

36 module slots.

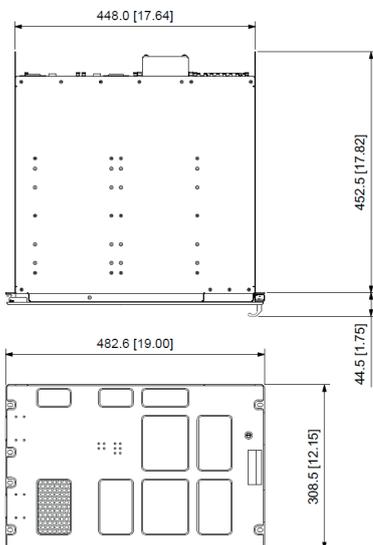

Video

144 input ports (12 slots).
144 output ports (12 slots).
144 configurable ports (12 slots).

Audio

144 configurable ports (12 slots).
144 outputs (12 slots).

Frame Dimensions

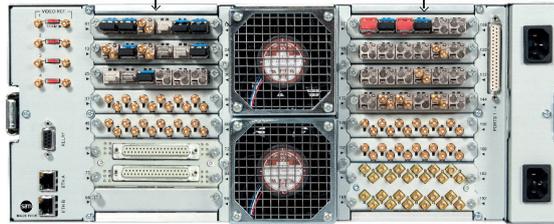

96 I/O Ports

Rear module slot (x8).
All ports independently user configured as **Inputs** or **Outputs**.
Accommodates 12 port SDI or 24 port AES I/O modules.

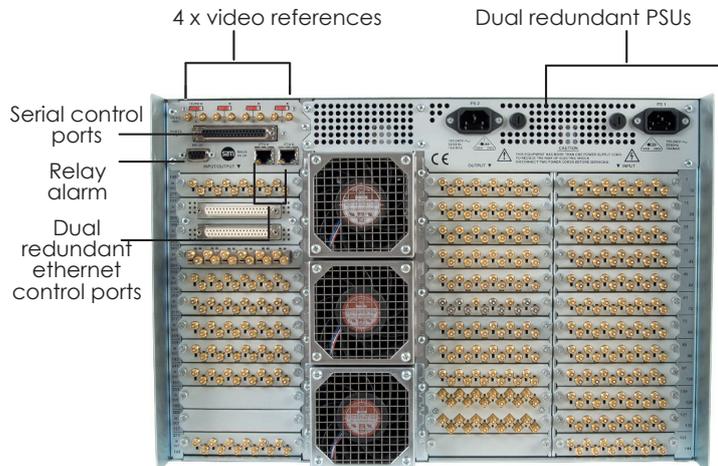

Thermally controlled 'Dual Fan' modules

96 I/O Ports

Rear module slot (x8).
All ports independently user configured as **Inputs** or **Outputs**.
Accommodates 12 port SDI or 24 port AES I/O modules.

Physical	
Weight	18kg (40lb) max. fully loaded (all options)
Power	
Voltage	100-240V AC, 47-63 Hz,
AC Input Power	384W max. (Includes all redundancy options)
Fusing	15A fast blowing fuses (x 2, on each PSU, not user replaceable)

Video	144 Inputs or Outputs	144 Outputs	144 Inputs
Audio	144 Inputs or Outputs	144 Outputs	No Audio

Physical	
Weight	31kg (68lb) max. fully loaded (all options)
Power	
Voltage	100-240V AC, 47-63 Hz,
AC Input Power	540W max. (Includes all redundancy options)
Fusing	Fuse 10A fast blow (on rear panel)

SDI & AES Input/Output Modules

SDI Rear Module for SFP 'Plug-Ins' (VG-RM6SFP - SDI)

No. of SFP ports	6 (12 x SDI signal ports)
Data rates	2.970Gb/s, 2.970/1.001Gb/s, 1.485Gb/s, 1.485/1.001Gb/s, 270Mb/s
Signal standards	SMPTE 424M/292M/259M (Reclocked – 'Bypass' option). DVB-ASI (Non reclocked)

Note: SDI re-clocking circuitry is contained in VG-RM6SFP-SDI. All SFP modules are non reclocking.

VG-RM6SFP-SDI

Catsii Multi-Color LED Indicators (12)

Blue	Output (Tx) = 'OK'	Green	Input (Rx) = 'OK' - Signal present	Flash Red	Error/Plug-in mismatch to configuration
Amber	Output (Tx) = OFF/Laser disabled	Red	Input (Rx) = No Signal detected	'OFF'	EMI-Dust SFP/No Plug-in

AES Audio Input/Output Modules

AES Balanced - VG-RM24D-AES

AES Ports	24, Balanced	Impedance	110Ω +/-20%
Connectors	37w D type socket	Signal standards	AES3-2009

Formats Supported (both types):

- Synchronous AES & Dolby E - Fully transparent
- Asynchronous AES - sample rate converted on inputs
- Asynchronous Dolby E - not supported

AES Unbalanced - VG-RM24H-AES

AES Ports	24, Unbalanced	Impedance	75Ω +/-2Ω
Connectors	HD-BNC	Signal standards	AES3-2009

Vega 100 Input Processing Module

The Vega Input Processing module can be used for the following functions:

- Audio de-embedding (16 channels)
- Line Synchronization
- Audio track shuffling within each video channel
- Silence or test tone insertion

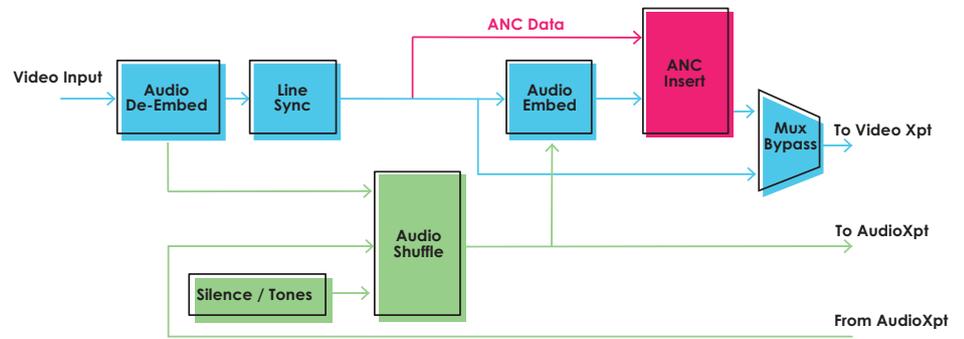

When an Audio Crosspoint is fitted to the Vega router:

- Input Embedding of routed audio channels from any input

Key Features:

- Embed any combination of audio from the incoming video, any audio source via the audio crosspoint, silence or test tones.
- Embed shuffled audio channels before the video crosspoint.
- Transparent to all Ancillary data (HANC and VANC).
- HANC and VANC data re-inserted on the same line.
- Audio embedding bypass path.

3G-B	0.04 (serial domain bypass)	N/A
DVB-ASI	0.04 (serial domain bypass)	N/A

Audio Processing

AES	Transparent to VUC bits. Parity regenerated on outputs.
Dolby E	Transparent to Dolby E
Power Consumption	12W

Vega 100 Output Processing Module

The Vega Output Processing module can be used for the following functions:

- Clean and Quiet Switching
 - Line Synchronization with switch line disturbance clean-up
 - Audio V fade
- Audio track shuffling within each video channel
- Re-entering video with embedded audio into the video matrix
- Re-entering shuffled audio channels to the audio matrix
- Silence or test tone insertion
- Line Synchronization

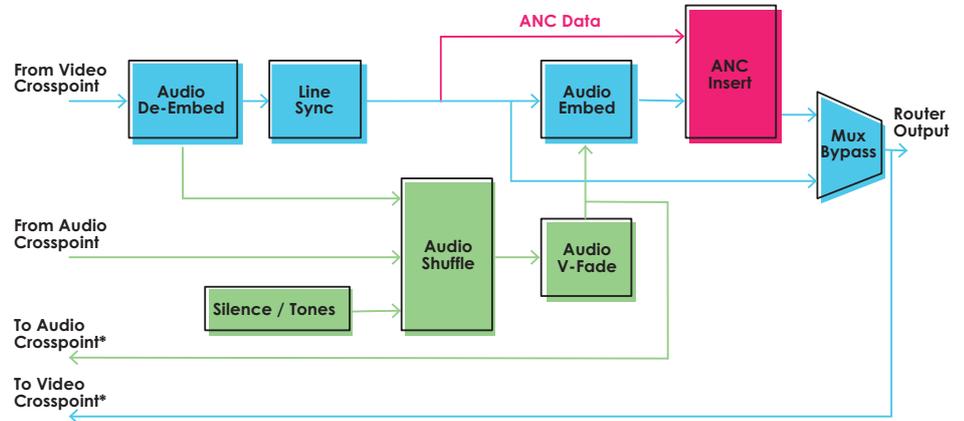

When an Audio Crosspoint is fitted to the Vega router:

- Audio embedding from any audio input (16 channels per video)

Key Features:

- Embed any combination of audio from the incoming video, any audio source, silence or test tones.
- Embed shuffled audio channels after the video crosspoint.
- Transparent to all Ancillary data (HANC and VANC).
- HANC and VANC data re-inserted on the same line.
- Audio embedding bypass path.

VG-RMO9PR

* Not available in V700 Output only slots

Specification

No of Outputs	9

Power Consumption	12W

Vega 100 Audio Crosspoint and MADI Input/Output Module

The Vega audio crosspoint also has 6 MADI inputs and 6 MADI outputs.

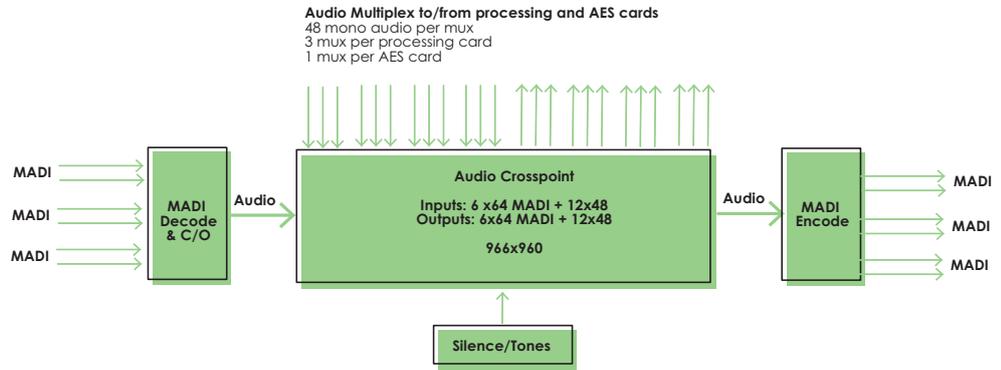

Together with internal audio connections to and from processing and AES cards, it routes signals from any MADI, AES or embedded input to any MADI, AES or embedded output.

The Audio router card must be installed when routing audio to or from any video channel on a processing card.

Routing between AES inputs and outputs only does not require an audio crosspoint.

- MADI inputs configurable as 6 in or redundant 3 in with auto failover.
- MADI outputs configurable as 6 out or dual 3 out.
- Audio routing between any MADI, AES or embedded input to any MADI, AES or embedded output.
- Synchronous 48kHz operation.
- Transparent to Dolby E.
- Transparent to AES Validity, User and Channel Status bits.
- Silence and test tone insertion.

VG-RM6MADI

Specification

Inputs	
No & type	6 / 3 dual redundant with auto -failover). HD-BNC (Gold Plated) 75Ω
Signal	MADI (56 or 64 channel, 48kHz)
Return Loss	<15dB to 125MHz
Maximum cable length	100m (328ft) Belden 1855 (from 600mV source)
Outputs	
Output Amplitude	600mV pk-pk ±10%
Rise / fall time	< 650ns
Signal path delay (MADI in to MADI out)	Minimum (µs)
Audio Routing	
AES	Transparent to VUC bits. Parity regenerated on outputs.
Dolby E	Transparent to Dolby E

System Examples

Video only, or Two Level Video and AES Routing

Video requires one or more of video SFP or video coax cards.

Discrete AES inputs and outputs require one or more balanced AES or Unbalanced AES cards. In this scenario, routing audio does NOT need an audio crosspoint.

Cards can be fitted as shown in the table opposite.

Frame	Video (coax or SFP) cards	AES audio (balanced or unbalanced) cards
Vega 200	Fit in any slot - max 96 ports (Vega 200)/192 ports (Vega 400) (video or AES inputs or outputs in any combination)	
Vega 400		
Vega 700	Fit in any slot. Note: 12 input only slots (144 inputs) 12 output only slots (144 outputs) 12 bi-directional slots (144 ports configurable as inputs or outputs)	Inputs - fit in 12 bi-directional slots only (max 144 inputs) Outputs - fit in output or bi-directional slots (max 288 outputs) Audio router sizes 1 x 287 to 144x144 (stereo AES sizes)

Video Routing with Clean and Quiet Switching on Outputs

Output processing modules provide clean and quiet switching (CQS) on video outputs. They can be fitted as shown in the table opposite.

Clean and quiet switching does not require an audio crosspoint to be fitted.

Frame	Video (coax or SFP) Inputs or Outputs	Clean & Quiet switching Video Outputs	
		Fit Into	Max no. of cards (video O/P)
Vega 200	Fit in any slot	Any slot	7 slots (56 outputs)
Vega 400	Fit in any slot	Any slot	15 slots (135 outputs)
Vega 700	Fit in any slot. Note: 12 input only slots (144 inputs) 12 output only slots (144 outputs) 12 bi-directional slots (144 ports configurable as inputs or outputs)	12 Output slots (108 outputs and/or bi-directional slots)	24 slots (216 outputs)

System Examples cont.

Embedded Audio and MADI Routing

The Audio crosspoint & MADI Interface card has 6 x MADI inputs and 6 x MADI outputs. Each pair of MADI inputs and outputs can be configured as redundant inputs with auto-failover, and dual outputs.

For any embedded or MADI routing the Audio crosspoint & MADI Interface card must be fitted.

Once fitted, all audio routing is via the audio crosspoint.

Audio crosspoint capacity	Inputs	Outputs
MADI (64 channels per MADI)	6 x 64 = 384	6 x 64 = 384
Internal busses to processing and AES cards (48 channels per bus)	12 x 48 = 576	12 x 48 = 576
Silence and test tones	6	-
Total	966	960

Audio Routing with Embedded and MADI audio

Interconnections between the audio crosspoint, and processing and AES cards, use a 48 channel audio multiplex (Amux).

An Amux supports:

- Up to 24 pairs on an AES module
- Up to 16 channels from/to 3 video signals on a processing module

AES modules have 1 Amux in and 1 Amux out.

Processing modules have 3 Amuxes in and 3 Amuxes out (9 video signals, with 16 channels per video).

Amux use is user configurable – for maximum flexibility, each Amux is individually enabled on the input/output modules.

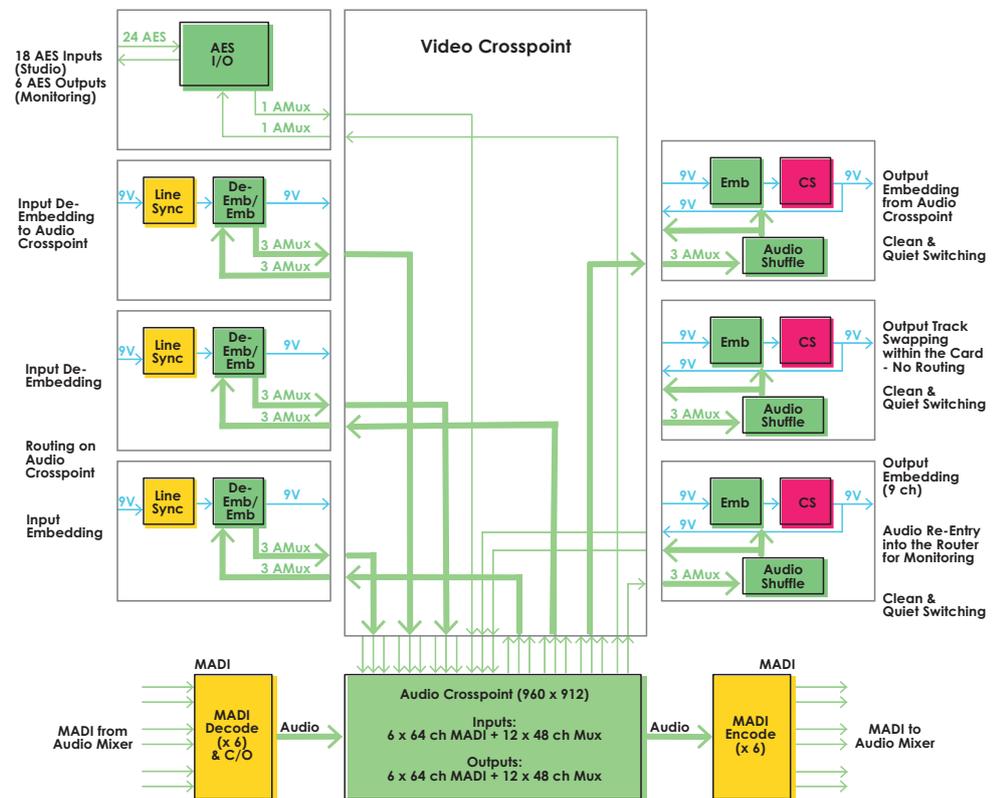

Automatic configuration then connects up to 12 Amuxes in to the audio crosspoint, and up to 12 Amuxes out from the audio crosspoint.

Amuxes are not required for:

- MADI inputs and outputs – these are integral to the Audio crosspoint module.
- Line synchronization and clean switching functions.
- Audio channel swapping within a video signal.

Audio multiplex usage	Crosspoint Inputs	Crosspoint Outputs
Input processing card	3 (de-embedding and audio routing)	3 (input embedding from the crosspoint)
Output processing card	3 (embedding of routed audio from the crosspoint)	3 (output embedding from the crosspoint)
AES input/output modules	1	1

The diagram below shows some possible configurations.

All channels are handled as mono audio on the crosspoint. Controller configuration allows audio to be set as stereo or surround signals containing multiple mono channels.

Ordering Information

Mainframes

VG-MF200	Vega 200 Frame. Includes 2RU chassis, single PSU, single Controller, single crosspoint, and cooling fans
VG-MF400	Vega 400 Frame. Includes 4RU chassis, single PSU, single Controller, single crosspoint, and cooling fans
VG-MF700	Vega 700 Frame. Includes 7RU chassis, single PSU, single Controller, single crosspoint, and cooling fans

Note: The mainframe is supplied with one PSU, one cross-point card and one controller card. Dual redundant PSUs and/or cards are purchased separately and fitted prior to system test and dispatch. Either none, one, two or all three options should be purchased (per mainframe) depending on the level of redundancy thought to be appropriate. For critical 'Live' applications, all three DR options are recommended. Alternatively any option can be purchased for upgrade on site at a later date or simply for spares/replacements.

Vega 200 Dual Redundant Options and Spares

VG-PSU1	Vega Power Supply Unit for VG-MF 200, 400, 096H and 192H frames
VG-XPT200	Vega crosspoint for VG-MF200 & VG-MF096H 2U frame
VG-CTL6464	Vega Controller Card for VG-MF200 and VG-MF096 mainframes
VG-FAN1	Vega Rear Fan Unit for VG-MF200 & VG-MF096H 2U frames

Vega 400 Dual Redundant Options and Spares

VG-PSU1	Vega Power Supply Unit for VG-MF 200, 400, 096H and 192H frames
VG-XPT200	Vega crosspoint for VG-MF200 & VG-MF096H 2U frame
VG-CTL6464	Vega Controller Card for VG-MF200 and VG-MF096 mainframes
VG-BUF	Vega Buffer Card for 400, 700, 192 & 432 frames
VG-CTLBUF	Vega Controller & Buffer Card Set for 400, 700, 192H & 432H frames. Consists of VG-CTL6464 and VG-BUF
VG-FAN2	Vega Rear Fan Unit for VG-MF400, 700, 192 & 432 frames

Vega 700 Dual Redundant Options and Spares

VG-PSU2	Vega Power Supply Unit for VG-MF700 & VG-MF432H frame
VG-XPT700	Vega crosspoint for VG-MF700 & VG-MF432H 7U frame
VG-CTL6464	Vega Controller Card for VG-MF200 and VG-MF096 mainframes
VG-BUF	Vega Buffer Card for 400, 700, 192 & 432 frames
VG-CTLBUF	Vega Controller & Buffer Card Set for 400, 700, 192H & 432H frames. Consists of VG-CTL6464 and VG-BUF
VG-FAN2	Vega Rear Fan Unit for VG-MF400, 700, 192 & 432 frames

Compliance

EMC - Emissions	EN55103-1 (EU), FCC Part 15 (USA)
EMC - Immunity	EN55103-2 (EU)
Safety	EN60950 (EU), UL1419 (USA)
Hazardous Material	RoHS-6 (UK) – Complies with EU Directive

Auxiliary Ports

Physical Layer	RS485 x 4 ports
----------------	-----------------

Control & Status

Network

Physical Layer	Ethernet 100 Base-T RJ45
----------------	--------------------------

Video References

No. of inputs	4 looped HD-BNC
Impedance	75Ω +/-0.1% or Hi Z (switched on rear panel)
Signals	1Vpk-pk Analog Video/Synchs/Tri-level HD synchs
Switching Lines	Line 10 (525), Line 6 (625), Line 7 (HD)

Alarm Relay

Connector	9-way D/female/screw lock, NO & NC contacts
-----------	---
